PROJECT & PROGRAM EXPERIENCE

Strategic Lead & Lead Project Coordinator, STEA Project Group

Space Generation Advisory Council (Volunteer Role) | February 2025 - Present

- Orchestrate a portfolio of global tech initiatives, such as REFRA-SOS (a natural-disaster modeling project using SAR data and social media analysis) and GIS-PNHRA (a GIS analysis of maternal care in Kenya)
    - Head technical discussions for projects, e.g. leading a PyTorch-based ML team for REFRA-SOS, building a model with 20x improved latency and 90.9% accuracy over standard solutions
- Manage product lifecycles for multiple concurrent workstreams, directing cross-functional teams across 5 continents to ensure high quality, on-time delivery of products

Product Lead, Executive Producer

Shuffleboard Studios (Part-time Role) | September 2023 - Present

- Direct an interdisciplinary 10-person core team alongside ~50 total contributors, overseeing production cycles and development work for an internet awards show series (1M+ views)
- Lead meetings with teammates to ensure deliverables are finished on time, as well as with external clients and sponsors to manage expectations and scope
- Write high-level planning documents, status updates, and post-mortems to distill complex technical data into actionable strategic recommendations for both internal and external stakeholders

ENGINEERING EXPERIENCE

Software Engineer II, Outdoor/Fitness Core Team

Garmin (Full-time Role) | January 2025 - Present

- Deliver features used by >50M users by implementing front-end smart-watch software in C++, using proprietary Garmin tech stacks optimized for <32MB RAM operating systems
- Work on a small, high-visibility task force, contributing to system-level design discussions for company-wide processes and iterating on feedback directly from the CEO and other senior leadership
- Facilitate cross-functional collaboration with graphics and UX teams to create and iterate on front-end interfaces, turning usability feedback into technical requirements

Ground Software Engineer

United Launch Alliance (Full-time Role) | June 2023 - December 2024

- Improved NASA formal acceptance test speed by 50% by devising and coding, in C++, suites of hardware component simulations to satisfy NASA requirements for proprietary simulation systems
- Created and executed comprehensive test suites across gTest and proprietary scripting frameworks for new features, and demonstrated said features for formal acceptance by the customer
- Served as ground software launch operator during rocket launches, debugging critical issues under live constraints in coordination with flight software and launch system teams

---

EDUCATION

New York University | Bachelor of Arts | Graduated May 2023

Major: Computer Science, Minors: Mathematics, Astronomy

Honors: Magna Cum Laude (GPA: 3.852), Presidential Honors Scholar, University Honors Scholar

---

SKILLS

- **Planning:** Strategic Roadmapping, MVP Scoping, Resource Allocation
- **Execution:** Agile/Scrum, Backlog Prioritization, Risk Identification/Mitigation, Kanban Management
- **Technical:** Office Suite, Jira/Confluence, Notion, Figma, C/C++, Python, Linux/Unix
